-- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
-- TISSUE SPECIFICITY: EXPRESSED ON THE SUBFACE OF ACTIVATED T-CELLS.
-- INDUCTION: OPTIMAL BY PMA AND IONOMYCIN.
-- SIMILARITY: CONTAINS A LA-NGFR/THRR-TYPE CYSTEINE-RICH REGION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CHÂRACTERIZATION, AND SEQUENCE OF 25-29.

Immunol. 149:3921-3926(1992).

-i-FUNCTION: RECEPTOR FOR A CYTOKINE LIGAND KNOWN AS CD40L.

-i-SUBCELLULAR LOCATION: TYPE I MEMBRANE PROPEIN.

-i-SUMILARITY: CONTAINS A LA-NGFR/TNFR-TYPE CYSTEINE-RICH REGION.

A;Title: CDNA cloning of the rat IGF I receptor: Structural analysis of rat and human IG
                                                                                                                                                                                                                                                                                                                                           RESULT 14

A-6071

B-cell activation protein CD40 precursor - human
N;Alternate names: B-cell surface antigen Bp50
C;Species: Homo sapiens (man)
R;Stamenkovic, I.; Clark, E.A.; Seed, B.

S-LAMININ IS CONCENTRATED IN THE SYNAPTIC CLEFT OF THE NEURONGSCULAR JOUCTION.

---- DOMAIN: THE ALPHA-HELICAL DOMAINS I AND II ARE THOUGHT TO INTERACT WITH OTHER LAMININ CHAINS TO FORM A COILED COIL STRUCTURE.

---- DOMAIN: DOMAINS UT AND IV ARE GLOBULAR.

---- SIMILARITY: CONTAINS 1 LAMININ EGF-LIKE DOMAINS.

---- SIMILARITY: CONTAINS 1 LAMININ DOMAIN IV.

THE BETA-2 CHAIN IS A SUBUNIT OF LAMININ-3 (S-LAMININ), LAMININ-4 (S-MEROSIN), AND LAMININ-7 (KS-LAMININ).

-1 SUBCELLULAR LOCATION: EXTRACELLULAR; FOUND IN THE BASEMENT MEMBRARES (MAJOR COMPONT).

-1 TISSUE SPECIFICITY: NEUROMUSCULAR SYNAPSE AND KIDNEY GLOMERULUS.

-1 DOMAIN: THE ALPHA-HELICAL DOMAINS I AND II ARE THOUGHT TO INTERACT WITH OTHER LAMININ CHAINS TO FORM A COLLED COIL STRUCTURE.

-1 DOMAIN: DOMAINS VI AND IV ARE GLOBULAR.

-1 SIMILARITY: CONTAINS I LAMININ N-TERMINAL DOMAIN (DOMAIN VI).

-1 SIMILARITY: CONTAINS I LAMININ DOMAIN IV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     InterPro; Lrkuuzuw; -.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DOMAIN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DOMAIN
  -1- FUNCTION: BINDING TO CELLS VIA A HIGH AFFINITY RECEPTOR, LAMININ
-1- FUNCHILE SSSILES LENDING TO CELLS VIA A HIGH AFFINITY RECEPTOR, LAMININ
-1- STHOUGHT TO MEDIATE THE ATTACHMENT, MIGRATION, 6 ORGANIZATION OF
CELLS INTO TISSUES DURING EMBRYONIC DEVELOPMENT BY INTERACTING
WITH OTHER EXTRACELLULAR WATRIX COMPONENTS,
-1- SUBBUNIT: LAMININ IS A COMPLEX GLYCOPROTEIN, CONSISTING OF THREE
DIFFERENT POLYPEPTIDE CHAINS (ALPHA, BETA, GAMA), WHICH ARE BOUND
TO EACH OTHER BY DISULFIDE BONDS INTO A CROSS-SHAPED MOLECULE
COMPRISING ONE LONG & THREE SHORT ARMS WITH GLOBULES AT EACH END.
THE BETA-2 CHAIN IS A SUBUNIT OF LAMININ-3 (S-LAMININ), LAMININ-4 (S-MEROSIN), AND LAMININ-7 (KS-LAMININ).
-1- SIGNEELLULAR LOCATION: EXTRACELLULAR
COMPONENT). S-LAMININ IS CONCENTRATED IN THE SYNAPTIC
CLEFT OF THE NEUROWISCULAR JUNCTION.
-1- DOMAIN: THE ALCHA-HELICAL DOMAINS I AND II ARE THOUGHT TO INTERACT
WITH OTHER LAMININ CHAINS TO FORM A COLLED COLL STRUCTURE.
-1- DOMAIN: THE ALCHA-HELICAL DOMAINS I AND II ARE THOUGHT TO INTERACT
WITH OTHER LAMININ VI AND IV ARE GLOBULAR.
-1- SIMILARITY: CONTAINS 1 LAMININ N-TERMINAL DOMAIN (DOMAIN VI).
-1- SIMILARITY: CONTAINS 1 LAMININ N-TERMINAL DOMAINS.
-1- SIMILARITY: CONTAINS 1 LAMININ DOMAIN IV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This SWISS-PROT entry is copyright. Nature 398:533-538(1999).

- I- FUNCTION: RECEPPOR FOR TNF-ALPHA. HIGH AFFINITY FOR TNA-ALPHA AND APPROXIMATELY 5-FOLD LOWER AFFINITY FOR TNF-BETA.

- I- FUNCTION: TYPE I EMBHRANE PROFIEIN.

- I- PTM: PHOSPHORYLATED; MAINLY ON SERINE RESIDUES WITH A VERY LOW LEVEL ON THRENONIRE RESIDUES.

- I- PHARMACEUTICAL: AVAILABLE UNDER THE NAME ENBREL (IMMUNEX AND WYETH-AYERST). USED TO TREAT MODERATE TO SERVERE RHEUMATOID ARTHRITIS (RA). ENBREL CONSIST OF THE EXTRACELLULAR LIGANO-BINDING PORTION OF THERE DAY MODERATE TO SERVERE RHEUMATOID.

-!- PUNCTION: RECEPTOR FOR THE OX40L/GP34 CYTOKINE.
-!- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
-!- TISSUE SPECIFICITY: ACTIVATED T-CELLS.
-!- SIMILARITY: CONTAINS A LA-NGFR/THFR-TYPE CYSTEINE-RICH REGION.

-i - FUNCTION: RECEPTOR FOR A CYTOKINE LIGAND KNOWN AS CD40L.

-i - SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

-i - SIMILARITY: CONTAINS A LA-NGFR/TNFR-TYPE CYSTEINE-RICH REGION.

-:- TISSUE SPECIFICITY: EXPRESSED ON THE SURFACE OF ACTIVATED T-CELLS.
-:- INDUCTION: OPTIMAL BY PMA AND IONOMYCIN.
-:- SIMILARITY: CONTAINS A LA-NGFR/TNFR-TYPE CYSTEINE-RICH REGION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pollok K.E., Kim Y.-J., Zhou Z., Hurtado J., Kin K.K., Pickard R.T.,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1. Immunol. 150:771-781(1993).
-!- FUNCTION: RECEPTOR FOR THE PUTATIVE CYTOKINE 4-1BBL. POSSIBLY ACTIVE DURING T CELL ACTIVATION
-!- SUBUNIT: PRINCIPALLY AN HOMODIMER, BUT ALSO FOUND AS A MONOMER.
                                                                                                                                                                   Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT 7
A46476
B cell-associated surface molecule CD40, long splice form - mouse
C; Species: Mus musculus (house mouse)
C; Species: Mus musculus (house mouse)
C; Date: 18-Jun-1993 #sequence_revision 18-Nov-1994 #text_change 17-Nov-2000
C; Accession: A46476; A46515
R; Torres, R.M.; Clark, E.A.
J. Immunol. 148, 620-626, 1992
A; Title: Differential increase of an alternatively polyadenylated mRNA species of murine
A; Recence number: A46476; MUID:92105763
A; Accession: A46476
A; Status: preliminary
A; Molecule type: mRNA
A; Residues: 1-305 < TOR>
A; Residues: 1-305 < TOR>
A; Residues: 1-305 < TOR>
A; Note: sequence extracted from NCBI backbone (NCBIN:75206, NCBIP:75207)
A; Note: this translation is not annotated in GenBank entry MUSCD40A, release 113.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cispecies: Phytolacca americana (Virginian pokeweed)
